24.	<p>Biomagnification I mark Definition: 1 mark</p>	1+1

	Biomagnification is defined as the accumulation of a particular substance(non degradable chemical) in the body of the organisms at different trophic levels of a food chain. One example of biomagnification is the accumulation of insecticide DDT which gets accumulated in zooplanktons	
25.	Ultrafiltration: Glomerulus reabsorption : tubular part of nephron	1+1
26.	a) Efficient supply of oxygen to body: to satisfy the energy needs, to maintain body temperature b) Because of residual volume OR a) Old xylem and vacuoles 1 m b) 1 m	1+1
	<p>The diagram illustrates the metabolic pathway of glucose. It starts with 'Glucose (6-carbon molecule)' on the left. An arrow labeled 'In cytoplasm' points to 'Pyruvate (3-carbon molecule)'. From 'Pyruvate', an arrow labeled 'Absence of oxygen (in yeast)' points to 'Ethanol + Carbon dioxide + Energy (2-carbon molecule)'. There is a small asterisk below 'Energy'.</p>

27	a) Barium sulphate, white colour ppt (b) $\text{Na}_2\text{SO}_4 + \text{BaCl}_2 \rightarrow \text{BaSO}_4 + 2\text{NaCl}$ (c) Double displacement/precipitation	$\frac{1}{2} + \frac{1}{2}$ 1 1
28	A- Cl_2 , B- CaOCl_2 , Bleaching powder $2\text{NaCl} + 2\text{H}_2\text{O} \rightarrow 2\text{NaOH} + \text{Cl}_2 + \text{H}_2$ $\text{Cl}_2 + \text{Ca}(\text{OH})_2 \rightarrow \text{CaOCl}_2 + \text{H}_2\text{O}$	$\frac{1}{2} + \frac{1}{2}$ 1 1
29.	a)i)small intestine ii) lipase iii) fatty acids and glycerol b) Peristalsis the rhythmic contraction and relaxation of lining of alimentary canal muscles which push the bolus forward in the canal is known as peristalsis	$\frac{1}{2} + \frac{1}{2} + \frac{1}{2}$ $\frac{1}{2}$ 1
30.	For solving the above given question, we will be using the mirror formula, i.e., $\frac{1}{f} = \frac{1}{v} + \frac{1}{u}$ Complete answer: Before we start solving the question, let us take a look at all the given parameters $f = -15\text{ cm}$ Negative sign as the mirror is a concave mirror $u = -10\text{ cm}$ Now, for the Part A By using the given values	

$$\Rightarrow \frac{1}{-15} = \frac{1}{v} + \frac{1}{-10}$$

$$\Rightarrow \frac{1}{v} = \frac{1}{10} - \frac{1}{15}$$

$$\Rightarrow \frac{1}{v} = \frac{1}{30}$$

So,
 $v = 30$ cm

Now, for the Part B

By using the formula for the magnification of the image

We have

$$m = \frac{v}{u}$$

$$\Rightarrow m = \frac{30}{10}$$

$$\Rightarrow m = 3$$

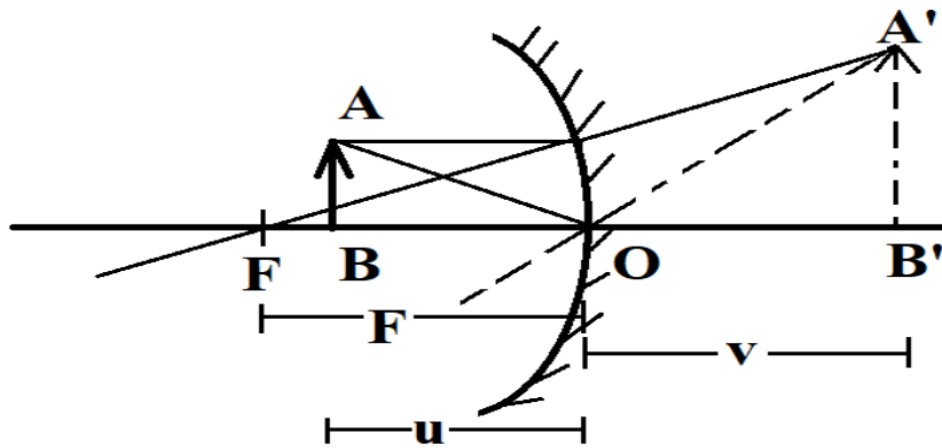

So, the image will be highly magnified in size.

Part C

The image will be Virtual and Erect in nature as v is positive

1

$\frac{1}{2}$

1 ½

31

(a) It is the central point of the lens through which a ray of light passes without suffering any deviation.

(b) The object will be placed at F.

1

(c)

$f = -20$ cm, $u = ?$, $v = -15$ cm, $h = ?$

1

	<p>Using the expression</p> $\frac{1}{f} = \frac{1}{v} - \frac{1}{u}, \text{ we have}$ $\frac{1}{-20} = \frac{1}{-15} - \frac{1}{u}$ <p>$u = 60 \text{ cm}$</p> <p>Object must be kept at 60 cm to the left from the lens.</p>	
32.	<p>Answer the following questions :</p> <p>(i) North pole to south pole. (ii) Tesla(T) (iii) The strength of magnetic field is higher in this region. (OR)</p> <p>(a) Due to the force exerted by the magnet within its magnetic field. (b) The pattern of lines demonstrates magnetic field lines. (c) It is because of Crowding of iron filings at the ends of the magnet and it indicates that the magnetic field is strongest near the poles of the magnet, and the magnetic field lines are closest at these locations and hence forms closed curves.</p>	<p>1 1 1 1 1 1</p>
33.	<p>According to 10 percent law, $\frac{1}{2} \text{ m}$</p> <p>Explanation:90% of the energy captured from the previous trophic level is lost to the environment and only 10 percent is made available to the next trophic level.1m</p> <p>In this food chain, at the 4th trophic level, 5 kJ energy is available to the snake</p> <p>\Rightarrow Energy available to Frog = 10% of 50 kJ $\frac{1}{2} \text{ m}$</p> <p>\Rightarrow Energy available to Grasshopper = 10% of 500 kJ $\frac{1}{2} \text{ m}$</p> <p>\Rightarrow Energy available to Grass = 10% of 5000 kJ. $\frac{1}{2} \text{ m}$</p>	3
